

# **STAR PROGRAMME 2017**

## **Next session Monday August 7th**

The **Science, Technology and Research Group (STAR)** would like to invite New Members of K&D U3A to attend our next Session. We will be looking at various items that we regularly use in our homes and discover more about them.

At the next STAR Group Meeting on **Monday August 7<sup>th</sup>** **Paul Roebuck** has kindly offered to give a presentation based on a display of products that we commonly use in our homes and to describe the chemical properties (both beneficial and potentially dangerous) of those items that we use so regularly.

Paul has suggested that we divide these items up into twelve different categories as indicated below..

In order to make this session a success we need **each of you** to PLEASE bring in items (carefully labelled with your name on) so that we can establish a display on a table so that we can each see what each of the items are.

Paul has said that he will re-read **John Emsley's** book '*Chemistry in the Home*' and just do the presentation 'off the cuff.'

IT IS VERY IMPORTANT THAT WE ALL HELP TO SUPPORT PAUL'S EFFORT by bringing a container from at least 2 of the following categories, preferably more please.

1. Medicine Cabinet
2. The Utility Room
3. The Bathroom
4. The Desk
5. The Toilet
6. Cupboard under the stairs
7. The Bedroom
8. The Kitchen
9. The Dining Room/Food & Drink
10. The Living Room
11. The Garage & The Car
12. The Garden Shed

**Chris Mason**

**STAR Group Leader**
